

Module 1: GCP and VM Introduction Assignment - 1

Tasks To Be Performed:

1. Signup on GCP for free tier.
2. Create a new project.
3. Install gcloud on your system, and configure it.
4. Deploy an Ubuntu VM of the minimum spec using the following methods:
 - gcloud local
 - gcloud from the browser
 - web console
5. Change the default region of VM deployment to Asia-south-1c.

Submit the screenshots for all the above steps for verification.
