

Module 2 – Assignment

Problem Statement:

You work for xyz organization. Your organization uses a UNIX/Linux based environment.

You have been asked to:

1. Create 3 users for the people in our server
 2. Create a group named “webdev” and add them in it
 3. Create a folder named “dev” with a file inside and give the file permission to be only opened by this group’s users
 4. Remove one user from the group and delete that user
 5. Move the file inside the folder to another folder and change the files group ownership
