UNIX Course Module 4

Hands-on: 1

UNIX/Linux Training

Shell Scripting

Step 1: Create a script file

```
                    intellipaat@localhost:~                          ✕

File  Edit  View  Search  Terminal  Help
[intellipaat@localhost ~]$ vi hello_script.sh
[intellipaat@localhost ~]$
```

Step 2: Add the Shebang header to your script

```
                    intellipaat@localhost:~                          ✕

File  Edit  View  Search  Terminal  Help
#!/bin/sh

~
~
~
~
~
~
~
~
"hello_script.sh" 1L, 1C                        1,0-1           All
```

Step 3: Add the task(s) which should be performed using this script

```
                    intellipaat@localhost:~                          ✕

File  Edit  View  Search  Terminal  Help
#!/bin/sh
pwd
echo 'Script to check the present working directory'
```

Step 4: Execute the shell script

```
intellipaat@localhost:~                                        ✕

File  Edit  View  Search  Terminal  Help

[intellipaat@localhost ~]$ ./hello_script.sh
/home/intellipaat
Script to check the present working directory
[intellipaat@localhost ~]$
```
